Notes

A. Highlighted dates show instrument changes (for any of the telescopes). Total in October: 6 (1 on weekends).

B. Names underlined in yellow indicate certified (or certified observer listed on observing request).

C. Program names in black on the 31" are robo mode, and those observers are considered certified.

D. DEVOGELE – NEOs

E. SCHLEICHER – Comets

- F. LEVINE KBOs (VR)
- G. MOSKOVITTZ -- V-type asteroids

H. FARNHAM – Comets J. ANDERSON – NURO by ROBO

K. SKIFF – Light curves

L. COVEY – Massive stars

SPECIAL NOTE #1: Dave Schleicher needs 31" comet observations between Nov 1 and 19 and 29-30 on nights when he does NOT have CCD time on the 42". These are local dates

of Nov 2,4,5,7,8,9,13.14.15.16.17,18,19,29,30 and impact nights used by SKIFF, VANBELLE, ANDERSON. The COTTO nights (Nov 5,7,8) are not easily interruptable nor is GOKHALE (Nov 18,19).

During Nov 1-19, Dave needs four 20m sets each night --- three on comet 46P when it is above 2 air masses and one on comet 21P at the end of the night.

During Nov 29-30, Dave needs 30m sets on comet 46P every two hours whenever it is above 2 air masses.

SPECIAL NOTE #2: Nov 26-30. ODELL needs the last two hours for W Cor

SPECIAL NOTE #3: Kelley (Und) wants to observe three comets (21P, 38P and 46P) once a night, every three nights whenever robo is on the 31".

SPECIAL NOTE #4: MOMMERT has asked for "2 nights spread over the quarter". This is not clear and I need to sort this out with him.

С
