- Notes
- A. Highlighted dates show instrument changes (for any of the telescopes). Total in September: 4 (1 on weekends)
 - B. Names underlined in yellow indicate certified (or certified observer listed on observing request).
 - C. Program names in black on the 31" are robo mode, and these observers are considered certified.
 - D. COVEY – Massive stars
 - E. MOSKOVITZ – V-type asteroids
 - F. ANDERSON – NURO by ROBO
 - G. SKIFF – Light curves
 - H. MUIRHEAD – CS111 class
 - J. ODELL – BW Vul and RW Ari
 - K. HAMILTON-DRAGER – Observational Techniques class
 - L. FARNHAM – Comets

SPECIAL NOTE #1: Moskovitz needs 31" photometry of asteroid 2005 UD. This requires 5.5 hours on several nights. I have selected (local nights of Oct 3, Oct 8, Oct 12 and Oct 16. Of these, Oct 12 is time critical. Nick and Brian S. need to coordinate on this project.

SPECIAL NOTE #2: Dave Schleicher needs 31" comet observations between Oct 4 and 21 and 31 on nights when he does NOT have CCD time on the 42". These are local dates of Oct 4,5,6,7,11,12,13,14,18,19,20,21,31 and impact nights used by SKIFF, VANBELLE, ODELL. The MUIRHEAD nights (Oct 6/7) are not easily interruptable nor is Nick's time-critical night of Oct 12. Dave needs four 20m sets each night --- three on comet 46P when it is above 2 air masses and one on Comet 21P at the end of the night.

SPECIAL NOTE #3: Kelley (Und) wants to observe three comets (21P, 38P and 46P) once a night, every three nights whenever robo is on the 31".

SPECIAL NOTE #4: MOMMERT has asked for "2 nights spread over the quarter". This is not clear and I need to sort this out with him.
