- Notes
- A. Highlighted dates show instrument changes (for any of the telescopes). Total in September: 6 (2 on weekends).
 - B. Names underlined in yellow indicate certified (or certified observer listed on observing request).
 - C. Program names in black on the 31" are robo mode, and those observers are considered certified.
 - D. ODELL – Variable stars
 - E. ANDERSON – NURO by ROBO
 - F. ANDERSON – Class
 - G. SCHLEICHER – Comets
 - H. LEVINE – KBOs (VR filter)
 - J. MANDUSHEV – Transits

SPECIAL NOTE #1: Kelley (UMd) is observing two or three comets once a night, every three nights, whenever ROBO is on the 31" for ~20-30m per night.

SPECIAL NOTE #2: Bauer (Umd) is observing four comets/week using ROBO; about 15m per target.

SPECIAL NOTE #3: Schleicher is observing comet G/Z from Sep 5 to Sep 22 (31"/ROBO)

a) 30 min every 2.5 hours when comet is above 2.0 airmass and moon is down or far away

b) Do not observe when Schleicher is on the 42"

SPECIAL NOTE #4: Mommert wants to do light curves of asteroids with 31"/ROBO in "chunks" totaling ~3 nights. Details TBD.
