- Notes
- A. Highlighted dates show instrument changes (for any of the telescopes). Total in March: 5 (0 on weekends).
 - B. Names underlined in yellow indicate certified (or certified observer listed on observing request).
 - C. Program names in black on the 31" are robo mode, and those observers are considered certified.
 - D. ODELL – Variable stars (Middle "half" of night only)
 - E. ANDERSON – NURO by ROBO
 - F. GENERIC ROBO
 - G. STEELE – WD 1145+017
 - H. MOMMERT – Dormant comets
 - J. KNIGHT – Asteroid 394130 (through night of April 1)

SPECIAL NOTE #1: SCHLEICHER – Observe 21P, 38P, 64P and 46P on robo nights as comets are available between 1/1 and 2/17. Take five 30-minute sets each night (details for a given night are TBD). Do not observe when the moon is more than half illuminated and above the horizon.

SPECIAL NOTE #2: KELLEY (UMd) – Observe 38P and 46P every three days with R (~10m/night; Details in their request)

SPECIAL NOTE #3: BAUER (Umd) –BAUER – Two comets per week/~30m per target. One half hour shortly after evening nautical twilight; one half hour shortly before morning nautical twilight. Targets are TBD

SPECIAL NOTE #4: MOMMERT – May ask for robo time to observe dormant comets. Objects are TBD.
