Experience:

Lowell Observatory, Flagstaff, Arizona. Astronomer, 2011-present. On staff with the observatory with a principal interest in astronomical interferometry with the Navy Prototype Optical Interferometer (NPOI), and high-resolution imaging with the Discovery Channel Telescope (DCT). *European Southern Observatory*, Garching bei München, Germany. PRIMA Instrument Scientist, 2007-2011. Responsible for the scientific development and use of the PRIMA (Phase-Referenced Imaging and Microarcsecond Astrometry) facility of ESO's Very Large Telescope Interferometer, including instrument implementation and commissioning. MATISSE Instrument Scientist, 2011. Responsible for the instrument development progress, including development of institutional agreements for budgets and deliverables. Member of the Astronomy faculty at the Associate Astronomer level.

Michelson Science Center, California Institute of Technology, Pasadena, California. Science Community Development Lead, 2002-2007. Responsible for administration of the Michelson Program at the MSC and coordination of scientific use of NASA time of the Keck telescopes. Additional activities include oversight of the Michelson Summer Workshop, MSC web page management, and independent scientific research.

The Jet Propulsion Laboratory, Pasadena, California. Senior Optical Engineer, Interferometry Technology Group, 1996-2002. Beginning with designing the basic optical layout of the Keck Interferometer, duties with KI included delay line and transport optic design, heavy construction of the interferometer facility, ensuing instrument installation, and scientific utilization of the interferometer. Additionally, scientific observations with the Palomar Testbed Interferometer included size and shape characterizations of nearby stars.

Saint Mary's College of Maryland, Saint Mary's City, Maryland. Visiting lecturer, Department of Physics, 1991.

Intermec Corporation, Everett, Washington state. Engineering intern, Product Assurance Department, 1990.

Harvey Mudd College, Claremont, California. Research assistant, Department of Physics, 1989.

Education:

University of Wyoming, Laramie, Wyoming. Ph.D. in Physics 1996. Advisor: H. Melvin Dyck. Dissertation: Angular Size Measurements of Highly Evolved Stars. Made use of the IOTA interferometer to measure the angular sizes and derived quantities, such as effective temperature and linear radius, for highly evolved stars, such as giants, supergiants, and Mira variable stars.

The Johns Hopkins University, Baltimore, Maryland. M.A. in Physics, 1993. Advisor: Paul D. Feldman. Thesis: Analysis of CO₂⁺ Features in Comet P/Halley Derived from Ultraviolet Spectrophotometry by ASTRON. The degree of asymmetry in the distribution of CO₂⁺ emitted from Comet P/Halley's nucleus was measured, both prior to and after perihelion in 1986, observing molecular bands found in the 250-350 nm wavelength regime with the ASTRON spacecraft. Additional work at JHU included engineering support for the sounding rocket program, both on campus and at NASA Wallops Flight Facility.

Whitman College, Walla Walla, Washington state. B.A. with honors in Physics–Astronomy, minor in Mathematics, 1990. Advisor: Katherine Bracher.
